

The fundamental misdirection: the SIR model

S

R

We can't solve these equations by hand, so we use computer simulations:

B

I

The fundamental model of disease transmission: the SIR model

We can't solve these equations by hand, so we use computer simulations:

What can we do with the SIR model?

Forecasts

Given where we are now, where will we be in n days?

<https://www.nytimes.com/interactive/2020/04/22/upshot/coronavirus-models.html>

$$\frac{dS}{dt} = -\beta IS$$

$$\frac{dI}{dt} = \beta IS - \gamma I$$

$$\frac{dR}{dt} = \gamma I$$

Just take these equations with plausible values for β and γ , and solve (simulate) them like we did on the previous slides!
