A model for SARS-CoV-2 viral kinetics

$$\frac{dT}{dt} = -\beta VT - \Phi IT + \rho R$$

$$\frac{dR}{dt} = \Phi IT - \rho R$$

$$\frac{dE}{dt} = \beta VT - kE$$

$$\frac{dI}{dt} = kE - \delta I$$

$$\frac{dV}{dt} = \pi I - cV,$$
